Week 7 Recap: From Triage to Responsible AI

Dominic Yeakel

9/18/2026

Days 1 - 2: The Human Foundation

Day 1

- **SOC Tier 1**
  - Monitoring and Triage
- **SOC Tier 2**
  - Investigate Escalated Alerts
- **SOC Tier 3**
  - Threat Hunting & IR
- **Runbook**
- **Playbook**
  - Failed Login Alerts
  - Impossible Travel Alerts
  - BEC Indicators
  - Suspicious Wire Transfer
- **Monitor SIEM & Test IR Plans**
- **SOC Feedback Loop**
  - Detect
  - Triage and Escalate
  - Resolve and Feedback

Day 2

- **IR Lifecycle**
  - Identification
  - Containment; short-term vs long-term
  - Eradication
  - Recovery
  - Verification
- **Incident Severity Levels**
  - Low
  - Moderate
  - High
- **Internal vs External Communication**
- **IT Team Roles**
  - Incident Commander
  - Forensic Analyst
  - Remediation Specialist
- Documentation, Documentation, **DOCUMENTATION!!!**

Days 3 - 4: Working w/ AI

Day 3

- **LLMs**
- **AI use in SOCs**
  - Alert Triage
  - Summarization
  - Query Generation
  - Threat-Intel Synthesis
- **Security Copilot** for Summarization & Query Generation
- **Defender XDR** Alert Triage & Phishing Triage Agent
- **Verify**
  - Accept
  - Modify
  - Escalate
- **Analyst Confidence w/ AI Tools**

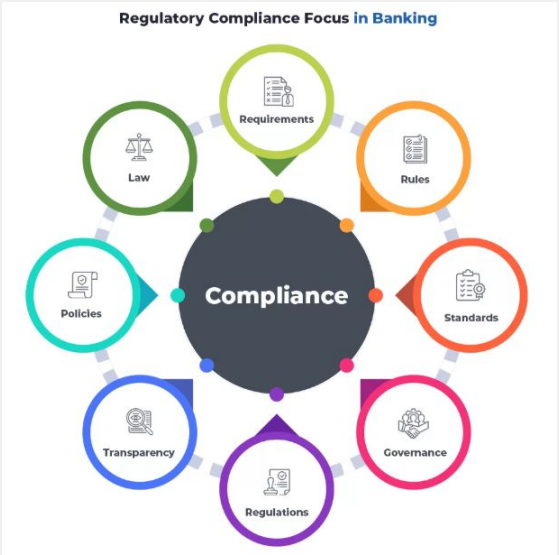

Day 4

- **Prompting Skills**
  - Clear Context
  - Specific Intent
  - Follow-Up Questions
- **AI Tasks**
  - Summarizing
  - Drafting
  - Explaining
  - REVIEW!!!
- **AI in Cloud Monitoring**
  - Defender for Cloud
  - Microsoft Sentinel
- **SOAR** (Security Orchestration, Automation, & Response)
  - AI assesses, SOAR acts
  - Analyst Review Required

Days 5: Using AI Responsibly

Day 5

- **AI-Driven Threats**
  - AI-Crafted Phishing
  - Deepfake-Enabled Social Engineering
  - Prompt Injection
- **Guardrails**
  - Data Handling
  - Prompt Hygiene
  - Avoiding Sensitive Data in Prompts
- Two Important **Banking Frameworks**
  - Treasury Financial Services AI Risk Management Framework
  - OCC, Fed, & FDIC Model Risk Management guidance
- **Regulations**
  - GDPR
  - GLBA
  - NYDFS Part 500

Week 7 Recap

Week 7 Main Ideas

- **Day 1 – SOC Foundations:** Alerts flow through Tier 1 (triage) → Tier 2 (investigation) → Tier 3 (threat hunting), guided by runbooks/playbooks for common threats (failed logins, impossible travel, BEC, wire fraud).
- **Day 2 – Incident Response:** The IR lifecycle (Identify → Contain → Eradicate → Recover → Verify) pairs with severity tiers, clear communication roles (Incident Commander, Forensic Analyst, Remediation Specialist), and rigorous documentation.
- **Day 3 – AI Enters the SOC:** LLM-powered tools (Security Copilot, Defender XDR) assist with triage, summarization, and query generation, but every AI output still requires analyst verification (Accept, Modify or Escalate).
- **Day 4 – Working with AI Tools:** Strong prompting (clear context, specific intent, follow-ups) drives better AI outputs for summarizing, drafting, & explaining. SOAR lets AI assess while analysts review the outputs & actions taken.
- **Day 5 – Responsible AI Use:** New AI-driven threats (AI-crafted phishing, deep fakes, prompt injection) demand guardrails (prompt hygiene, careful data handling), guided by banking-specific frameworks (Treasury AI Risk Management, OCC/Fed/FDIC Model Risk Guidance) and regulations (GDPR, GLBA, NYDFS Part 500).
