- The Number 1 rule in cybersecurity is to protect human life
- Proactively plan, effectively execute
- When it comes to zero trust, it is never trust, always verify
- Complexity over length for passwords
- Social engineering = hacking the human
- Two of the biggest threats that exist today are ransomware and phishing
- Where you can learn to hack = pwn.college
- CVE = Common Vulnerabilities and Exposures
- NIST = National Institute of Standards and Technology
- PCI DSS = Payment Card Industry Data Security Standard
- Document throughout, not at the end
- In GRC, non-compliance is not an option
- To prioritize work, use the eisenhower matrix
- Its not if you get hacked, its when
- Threat + Vulnerability = Risk
- A threat vector is the sum of attack vectors
- Humans are the weakest link in cybersecurity
- The humans are your first firewall in cybersecurity
- GRC forces us to enforce cybersecurity best practices
- Cybersecurity is not just an IT responsibility, it is everyone's responsibility
